

SCWT Club of GB Official Lists

“Wheaten diagnosed as Losing Protein by a recognised Veterinary Specialist”

“It is considered that a predisposition to the two protein losing problems of the SCWT is inheritable. However, it must be remembered that there are other causes of both protein losing enteropathy (PLE) and protein losing nephropathy (PLN) from certain inflammatory, infectious, neoplastic and metabolic diseases.” As there is no clear mode of inheritance for Protein Losing diseases the affected dog is listed.

A List – Wheatens clinically proven by post mortem or biopsy to have been affected by PLE/PLN

Name of affected dog	Sex	Parents	D.o.b & D.o.d	Comments
Abiqua Wild-Rose N Ribbons	Bitch	US GB Ch Bonney Sunswept Sage (USA) x Abiqua Wild Kiss At Midnight	25.06.04 14.01.12	PLN - AHT Post Mortem

Notes:

* Sire tested for the predisposing gene for PLN: Result 0-0

As with all lists, please be aware these are not definitive lists.

A word of caution - when a dog and/or its parents are listed on Open Registries, you need to look closely at the whole pedigree, just because a dog does not share an affix/suffix with a listed dog, does not mean it isn't related to your dog.

Please contact the Health Team for help with your pedigree health ancestry.

Parents with brackets after their name show their country of origin otherwise parents are GB born.

(NL) = Netherlands

(IKC) = Ireland

(USA) = United States

(SE) = Sweden

(DE) = Germany

AHT = Animal Health Trust

RVC = Royal Veterinary College
